

CAE Healthcare MultiPad Skills Trainer

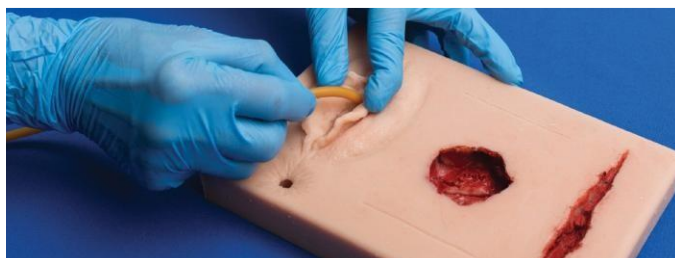

MultiPad clinical skills trainers for hands-on deliberate practice

Prepare your learners for sensitive patient care in a hospital setting and allow them to develop motor skills at home with your choice of MultiPad clinical skills trainers.

Unique, durable and reliable product that will withstand repetitive use

The MultiPad Skill Trainers, which feature hyper-realistic MedicSkin®, provide a method for learners to practice clinical skills remotely. These trainers support asynchronous as well as synchronous learning, allowing the learners to practice by themselves whenever they please, or together with their peers or faculty via video conferencing.

This solution provides a pedagogy for students to hone their clinical skills during this time of social distancing and closure of clinical skills labs.
